

TEED 540: Student Teaching Nugget

Incorporating Technology: My cooperating teacher did a great job of using many different forms of technology to enhance learning. Below are a few cool sites I like:

Glogster (www.glogster.edu) is a great site to create interactive glogs, which are short for graphical blogs. The users can insert text, images, photos, audio, videos, special effects, and other elements to create a multimedia online creation. It is great for students to present their knowledge on a particular topic or project in an engaging fashion!

Edmodo (www.edmodo.com) is a social learning network for teachers, students, and parents. Teachers and students are able to write posts to fellow students, teachers, and parents. It is great to post grades on, so parents can always check their child's progress. Teachers can also post homework on the site. This worked well for me to post math worksheets for entire units. This way the students could never say they left the worksheet at school and they also were able to submit their homework to me online. It saved paper and the parents liked that they always had access to the homework. Teachers can award badges to the students for good behavior or great work in class and the students love to receive these awards!
